

Layout & Editing

- In the **Sewing Order/Lock** dialog box, the object that is not stitched is displayed as well.
- Positioning mark printing is also available in **Embroidery print mode**, which was only available in **Image print mode**.

[How to print Positioning mark in **Embroidery print mode**]

Select **Print sewing area box & center axes** in **Embroidery print mode** of the **Print Setup** dialog.

Then select  (Positioning mark) on the right side.

Print sewing area box & center axes:
(This setting is only available when **Actual Size** is selected.)

 : Select this option to print black lines to indicate the sewing area and the center axes for the data.

 : Select this option to print Positioning mark on the center axes.

November,2008 Update to Version 8.02

Only the affected applications of PE-DESIGN 8 will show the version of this update.
Current version of each application

- Layout & Editing --> 8.02
- Design Center --> 8.02
- Programmable Stitch Creator --> 8.02
- Design Database --> 8.02
- Font Creator --> 8.02

GENERAL

- Fixed the situation where another application being used on the same computer prevents data from being sent from Design Center or Design Database to Layout & Editing.
- Fixed the situation where region sewing is not created correctly due to the magnification ratio used when importing the data from Design Center to Layout & Editing.
- The dialog box where the motif stitch/programmable fill stitch pattern can be selected has been changed so the dialog box can be resized.

Layout & Editing

- After entering a pattern with the Outline tools or the Manual Punch tools, it is possible to continue adding to the pattern.
- The color-picking feature in the **Edit Cross Stitch** dialog box has been made easier to use. A color can be picked for the selected area, regardless of whether the tool being used is for cross-stitches or backstitches.
- A message appears, requesting confirmation to save an unsaved image (added from a scanner, the Clipboard or the Portrait function) as an image file when a design (PES file) is being saved.
- Double-clicking a frame in the **Sewing Order/Lock** dialog box selects the corresponding object in the Design Page.
- Images can be moved using the arrow keys.

Design Center

- Fixed the situation where programmable fill stitches are reversed.
- Fixed the problem that Under Sewing on regions may not be properly done.

Font Creator

- Template images can be moved using the arrow keys.
